

Refresh

Get The Most Up-To-Date Web Page Versions

If you're only seeing older versions of web pages or webcams, it helps to refresh your browser doing a simple refresh (press the refresh button that often looks similar to this ↻ or pressing F5). On occasion, that may not be sufficient. If you are still not seeing the latest version, you can force a cache refresh:

On Smart Phones

- Visit the website using your browser.
- Turn airplane mode on.
- Turn Wi-Fi off.
- Return to your browser and do a refresh using the ↻ button.
(ignore the error message)
- Turn airplane mode off.
- Turn Wi-Fi on.
- Do another refresh ↻ within your browser to view the latest version.

On Computers

- Visit the website using your browser.
- Hold the shift key down while doing pressing the ↻ button.
Or
- Hold the shift key down while pressing F5.
